Little Rock Stormwater Manual Update

City of Little Rock Public Meeting

March 18, 2024

- Overview of Project
- Website and Survey
- Stakeholder Survey Results
- Planned Changes

WHAT IS A STORMWATER MANAGEMENT MANUAL?

CITY OF LITTLE ROCK

SEPTEMBER, 2016 UPDATE

STORMWATER MANAGEMENT AND DRAINAGE MANUAL

PUBLIC WORKS DEPARTMENT

A stormwater management and drainage design manual (SWMDM) provides guidelines and standards for the design and construction of drainage systems within the city.

THE MANUAL ADDRESSES:

Public Projects and Private Development

Floodplain Management

Water Quality and Stream **Protection**

State and Federal Regulations and Permits

Construction Site Runoff and Erosion

WHY UPDATE?

Updates will make sure that the manual remains effective and adequately addresses future flood risk, new stormwater practices, and state & federal regulations.

The manual is a part of the City's policies and programs to reduce pollutants in compliance with the Municipal Separate Storm Sewer System (MS4) permit issued by ADEQ.

TO REDUCE FLOOD RISK

Require use of the latest technology, methodologies, and data

TO IMPROVE WATER QUALITY

Encourage use of low impact development (LID) and green infrastructure

TO PROTECT STREAMS

Provide additional resources on use of stormwater best management practices (BMPs)

CHAPTER 13 ARTICLE II. – FLOOD DAMAGE PREVENTION

- (c) Statement of purpose. The purpose of this article is to promote the public health, safety and general welfare, to prevent adverse impacts from any floodplain development activities, and to minimize public and private losses due to flooding events in identified special flood hazard areas. This article advances the stated purpose through provisions designed to:
- (1) Protect human life and health;
- (2) Minimize expenditure of public money for costly flood control projects;
- (3) Minimize the need for rescue and relief efforts associated with flooding and generally undertaken at the expense of the general public;
- (4) Minimize prolonged business interruptions;
- (5) Minimize damage to public facilities and utilities such as water and gas mains, electric, telephone and sewer lines, streets and bridges located in floodplains;
- (6) Help maintain a stable tax base by providing for the sound use and development of flood prone areas in such a manner as to minimize future flood blight areas; and
- (7) Ensure that potential buyers are notified that property is in a flood area.

UNREGULATED CONSTRUCTION SITES CREATE COMPLAINTS

Sediment Trash Dirty water Dust Tracked dirt on roadways

Growth is inevitable, smart growth is possible.

INCREASED RUNOFF CHANGES STREAMFLOW CHARACTERISTICS

Streams are valuable and a resource to be protected.

- Water Supply
- Flood Control
- Habitat
- Recreation

PLANNED CHANGES

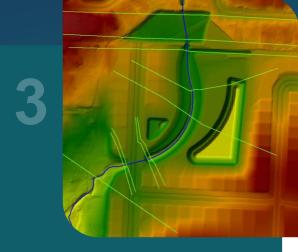

The City plans to overhaul the manual to improve the resilience of its infrastructure and better protect residents and property from the impacts of extreme weather events.

MODERNIZE

Streamline manual and improve readability and usability

ADDRESS WQ

Include measures to remove pollutants and incentivize green infrastructure

UPDATE METHODS

Utilize latest methods and expand analysis of storm events and offsite impacts

SWMM UPDATE PROCESS

- Review manual & ordinances
- Benchmark against peer cities
- Identify gaps

- Draft updated manual
- Recommend ordinance revisions

- Gather stakeholder input
- Determine community priorities

- Present to Mayor & Council
- Adopt new manual & ordinances

BENCHMARKING

- Peer Communities
 - City of Fayetteville
 - City of Memphis
- State Agencies
 - ARDOT*
 - Georgia Stormwater Manual

^{*}No longer considered a current reference

BENCHMARKING

- Developed a matrix of 38 different criteria for basis of comparison
- Held discussions with city staff from Fayetteville and Memphis

21	Rainfall	Little Rock Drainage Manual Hydro 35 & TP 40 IDF Curves 24 hr 10yr - 6.1", 25yr - 7.0", 50yr - 7.8", 100yr - 8.5"	Fayetteville Drainage Manual Hydro-35 & TP-40 IDF Curves 24 hr 10yr - 5.3", 25yr - 6.3", 50yr - 7.1", 100yr -	Georgia Stormwater Manual	Memphis Stormwater Management Manual

3.5	Manhola location	30" or smaller - max 500 feet over 30" - max 1200 feet	15" to 36" - max 400 ft 42" and larger - max 500 ft		< 42" max spacing 400 feet >42" max spacing 500 feet
3.6	Minor losses	Tables of minor loss coefficients			Table 6-5
IV.	Culvert Hydraulics				
4.1		List of guidelines for selection of headwalls or endwalls	Req'd for all culverts installed in public ROW. See sec. 6.3.4.6 for more details regarding apron installation for high depths/velocities.	Headwalls are required for all metal culverts and where buoyancy protection is necessary and use an apron where velocity will cause scour	refers to Table 5-1
4.2	Discharge velocity	Max allowable discharge velocity: Earth- 6 fps, Sod earth - 8 fps Paved or Riprap Apron - 15 fps Shale - 10 fps, Rock - 15 fps	See table 6.12 and 6.13 for maximum velocities (ft/s)	See Table 5.4-2 and 5.4-3 for velocity limitations	consistent with channel stability requirements at outlet, see chapter 3 for permissible velocities for channel linings
4.3	Computation method – HY8	FHA methods, software with approval	Appendix H softwares	Section 5.5 provides energy dissipation design	FHWA HDS-5 methods HY8
V. 1	Stormwater Detention				

PUBLIC MEETINGS

For the first round of public engagement, three public meetings were held to gather input from the public:

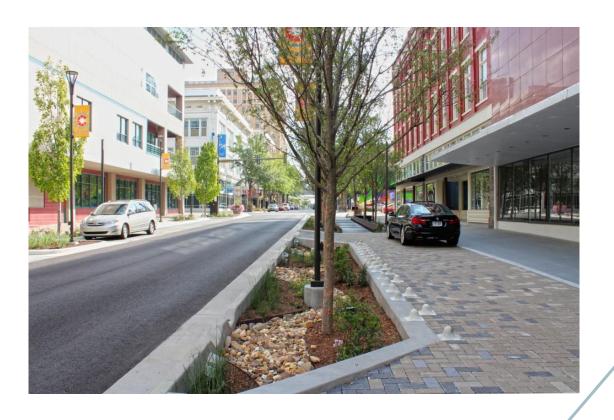

May 17th, 2023 **Dunbar Community Center**

May 22nd, 2023 **East Community Center**

May 25th, 2023 Adolphine Fletcher Terry Library

Upcoming Meetings

- March 25th: West Central Community Center (4521 John Barrow Road) - 6pm - 8pm
- March 28th: East Little Rock Community Center (2500 East 6th Street) - 6pm - 8pm
- **April 1st:** Adolphine Fletcher Terry Library (2015 Napa Valley Drive)- 6pm - 8pm

The website provides updates on the process, a link to the survey, and upcoming public meeting information.

The purpose of the survey was to gather feedback from stakeholders to help the City update the manual in a way that reflects the needs and concerns of the community.

Little Rock Stormwater Manual Updates

Survey

The City of Little Rock (City) is seeking input through the following survey about updating the Stormwater Management and Drainage Design Manual (manual). The manual provides guidelines and standards for the design and construction of drainage systems within the city. This survey is intended to gather feedback from a variety of stakeholders, including developers, engineers, and residents, to help the City update the manual in a way that reflects the needs and concerns of the community. The City is looking for input on a range of topics, including stormwater management, flood control, water quality, and erosion prevention. By updating the manual with community input, the City hopes to improve the resilience of its infrastructure and better protect residents and property from the impacts of extreme weather events.

This survey includes 24 questions and requires approximately 10-15 minutes to complete. Your feedback and comments are greatly appreciated and vital to the update process.

www.lrswmanualupdate.com

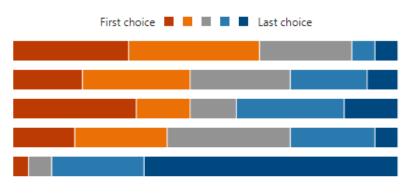

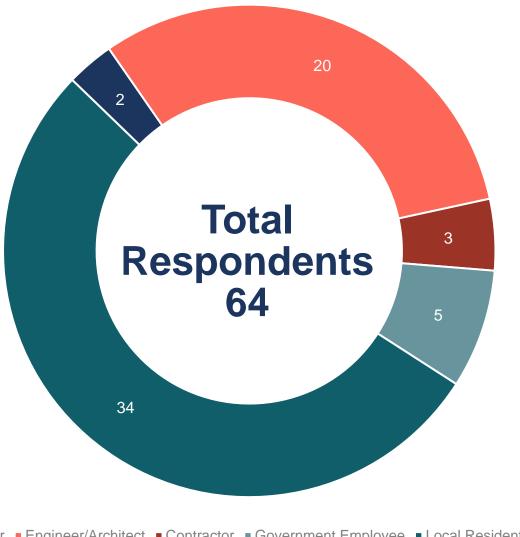

SURVEY RESULTS

The current Little Rock Stormwater Management and Drainage Manual (LRSMDM) adequately addresses storm water management (flooding, street drainage, offsite impacts, water quality, stream protection, etc.)

Rank Options

- Flood risk
- Impacts from future development
- Water Quality
- Roadway flooding and level of service
- Regulatory changes

■ Developer ■ Engineer/Architect ■ Contractor ■ Government Employee ■ Local Resident

PROPOSED OUTLINE

In general, the overall layout of the manual is similar. Some chapters were combined and streamlined, and two chapters were added.

Major addition to the manual is the Water Quality chapter.

Current Outline Outline Ordinance References only **Policies** Introduction I. Submittal Procedures II. Determination of Storm Runoff

III. Storm Drains and Drainage Appurtenances

IV. Culvert Hydraulics

V. Stormwater Detention

VI. Pavement drainage design

VII. Storm Drain Inlets

VIII. Storm Sewer Design

IX. Open Channel design

X. Erosion and sediment control

XI. General Requirements to Prevent Stormwater Damage

Appendix A Grading and Drainage Plan Checklist

Appendix B Soil Loss Calculation Tables

Appendix C Erosion and Sedimentation Controls

Appendix D References

Proposed Outline

Introduction

I. Submittal Procedures

II. Stormwater Criteria, Planning, and Regulations

III. Determination of Storm Runoff

IV. Storm Drainage System Design

V. Open Channel Design

VI. Culvert Hydraulics

VII. Stormwater Detention

VIII. Water Quality

IX. Construction Site Stormwater Management

Appendix A Drainage Report and Plans & Specifications Checklists

Appendix B Example Submittal

Appendix C Stormwater BMPs

Appendix D Erosion and Sedimentation Controls

Appendix E References

CHAPTER 1 – SUBMITTAL PROCEDURES

- Summarizes the submittal procedures and requirements for a stormwater management and drainage plan.
- This chapter outlines the items to be included in the Final Drainage Report and the Plans and Specifications.

- Streamline submittal procedures
- Clarify submittal requirements
- Provide example submittal in Appendix B

CHAPTER 2 – STORMWATER CRITERIA

Summarizes the major stormwater related criteria related to water quality, downstream impacts, and stormwater system Level of Service.

Goals of revision

- Establish primary goal and objectives of the manual
- Summarize main criteria in one location
- Provide accessible location for most common information

The objective of this manual is to:

- Reduce stormwater runoff pollutants and protect water quality
- Reduce downstream overbank flooding and channel erosion
- Safely convey the design storm and extreme storm events

CHAPTER 3 – DETERMINATION OF STORM RUNOFF

- Provides rainfall information and accepted runoff determination methodologies.
- Chapter 3 also provides equations and parameters for multiple hydrologic methodologies.

- Utilize best available rainfall data, Atlas 14, and provide updated IDF equation parameters
- Modernize hydrologic methods
- Revise applicable methodology based on watershed size
- Remove unnecessary calculation aids

Rainfall	TP-40	Atlas 14
10-year	6.1"	5.94"
25-year	7.0"	7.14"
50-year	7.8"	8.13"
100-year	8.5"	9.17"

Table 3.1 Hydrology Methodology

Methodology (Section)	Watershed Size
Rational Method (3.3)	Less than 20 acres.
SCS TR-55 Method (3.4)	Up to 200 acres.
HEC-HMS Method (3.5)	Greater than 200 acres.
Regression Method (3.6)	Greater than 2,000 acres.

CHAPTER 4 – STORM DRAINAGE SYSTEM DESIGN

This chapter focuses on the design of the storm drainage system, including inlets, street gutters, roadside ditches, small channels, swales, and the underground pipe system.

- Combine and condense several chapters
- Update design storm and spread limits based on street classification

Table 4.1 Design Storm for Street Classification

Street Classification	Design Storm
Principal Arterials	100-year
Major and Minor Arterials	100-year
All other streets	25-year

CHAPTER 5 – OPEN CHANNEL DESIGN

- Provides an overview of open channel design criteria and methods.
- In addition to natural channels, dry and wet swales, drainage ditches, riprap channels, concrete lined channels, and grass channels, encompass open channels.

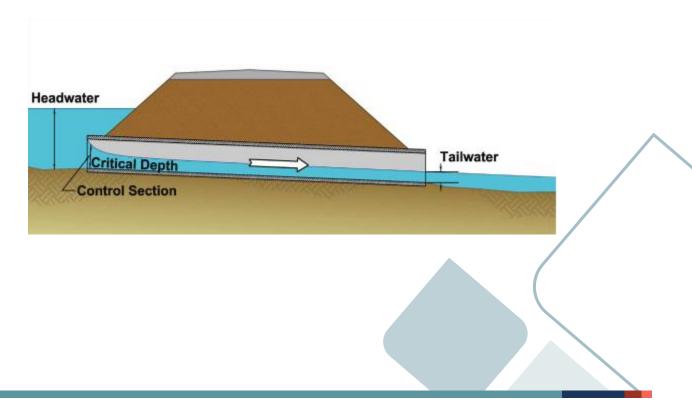

- Streamline chapter
- Update design storm and freeboard requirements
- Remove unnecessary calculation aids

CHAPTER 6 – CULVERT HYDRAULICS

- Outlines the analysis and design of culverts.
- This chapter also provides design criteria for culvert end treatments and energy dissipators.

- Streamline chapter
- Update design storm and freeboard/headwater requirements
- Remove unnecessary calculation aids

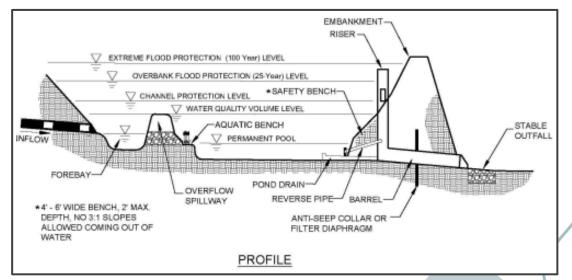

CHAPTER 7 – STORMWATER DETENTION

- Chapter 7 provides guidance on stormwater runoff storage for meeting for downstream channel protection and peak flow attenuation.
- The chapter provides analysis methods and allowable methods of detention storage such as dry ponds, wet ponds, and underground detention.

- Update methods of analysis and the storm events analyzed
- Require assessment of downstream impacts

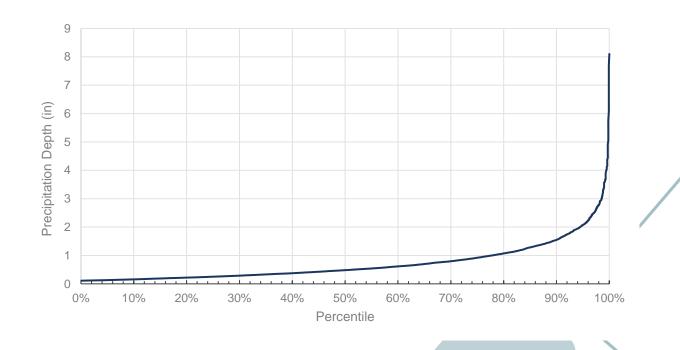

CHAPTER 8 – WATER QUALITY

Chapter 8 provides criteria for water quality treatment and guidance on the use of Low Impact Development (LID) and stormwater Best Management Practices (BMPs).

- Develop water quality criteria and BMP guidance
- Establish water quality volume (WQv) based on 90th (1.5") and 85th (1.3") percentile storm events

CHAPTER 8 – WATER QUALITY

- The Water Quality Volume (WQv) provides treatment from a site to reduce post-development total suspended solids (TSS) loadings by 80%, as measured on an average annual basis.
- This performance goal is based on the ADEQ NPDES small MS4 permit in accordance with U.S. EPA guidance.

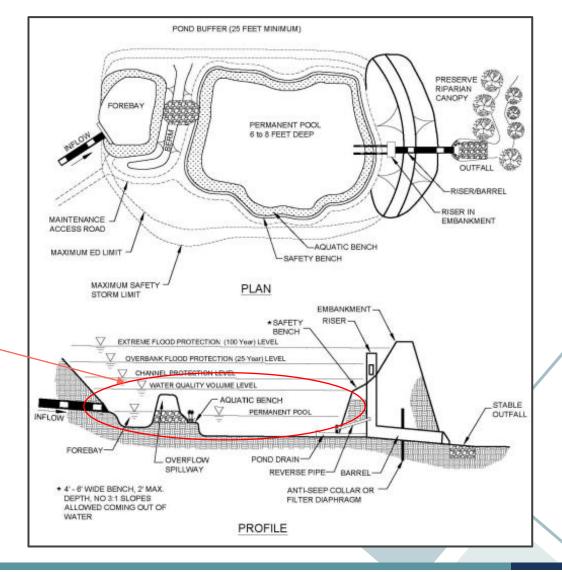

$$WQ_V = \frac{PR_VA}{12}$$

Where: WQv = water quality volume (ac-ft)

Rv = 0.05 + 0.009(I)where I is the percent impervious cover (i.e., 50% impervious is 50 not 0.5)

A = site area (acres)

P = 1.5 inches (new development) or 1.3 inches (redevelopment)

CHAPTER 9 – CONSTRUCTION SITE STORMWATER MANAGEMENT

- Provides information on construction site stormwater management practices which control erosion and sedimentation.
- Management practices include stabilization practices, erosion control, site runoff control, and sedimentation controls.

- Streamline chapter
- Clarify requirements and accepted erosion control methods

APPENDICES

The appendices provide guidance on submittal items and additional resources for water quality stormwater BMPs and construction site erosion controls.

Goals for revision

- Revise guidance for more consistent submittals
- Provide detailed information for selection and design of water quality BMPs
- Update erosion and sediment controls

Appendix A – Report and Plan Checklists

Appendix B – Example Submittal

Appendix C – Stormwater BMPs

Appendix D – Erosion and Sediment Controls

Appendix E – References

UPCOMING TIMELINE

MARCH 2024

Provide draft chapters for comment and hold public meetings

SUMMER 2024

Present manual to Mayor and City Council

JANUARY 2025

Require implementation of new manual for all new projects

Finalize manual after public comments

FALL 2024

Adopt manual and applicable ordinances

SUMMARY OF MAJOR CHANGES

Rainfall Rainfall Old manual used Hydro 35 & TP 40 New manual will require Atlas 14 rainfall **Detention Detention** lılı. Old manual required detention for the 25-year New manual will require detention for the 2-, 5-, 10-, 25-, 50-, and 100-year storm events storm event **Water Quality Water Quality** Old manual did not have water quality New manual will require treating 1.5 inches of rainfall runoff (or 1.3" for redevelopment) requirements **Design Storm Design Storm** New manual will have minimum design Old manual had design storm range from 10 storm of 25-year and all areas will require to 100-year based on roadway category dedicated 100-year overland flow path
